Grenite® 1.0

Originally developed for U.S. aerospace - now the ultimate surface material.

A surface material so unique it's patented. •Competitively priced compared to leading surface materials •80% post-consumer recycled components; the highest commercially available recycled content. •7.5 MOH hardness gives Grenite surfaces superior resistance to scratching, scorching, staining and wear and tear in heavy use applications. •NSF, Greenguard, Greenguard for Schools certified. •Class 1 (A) fire rated. •10-year limited warranty. •60" x 120" x 2cm sheets.
US Patent Number: 8933150.

About Us

Grenite® Sustainable Solutions LLC is the world leader in sustainable surfaces. **We offer what no other source can - a complete range of prices, colors, materials and performance features to match any project's requirements.**

Grenite key products/colors are stocked and distributed from our east and west coast warehouses. All Grenite surfaces can also be made to your order and require a 4 - 8 week production lead time. (Manufacturing is fast, shipping is slow!). This allows us to deliver superior quality, unsurpassed surface materials with recycled content at prices equal to virgin sourced material. Additionally this process gives us the flexibility to build custom materials to your specifications.

Our factory allows us to offer greater value to you: The **Grenite Components** program. **Factory production of spec components can yield 5 or more pieces for the price of one.** Grenite components can be made from any Grenite surface material or custom made to match your specifications.

Our latest offering is Grenite MarbleStone - a new surface material with the presence of marble and the rugged durability of quartz. For high end applications that are also high use, this is the perfect surface.
